

Homework 4

Read Fundamentals of Database Systems (fdb) Chapter 3, "Data Modeling Using the Entity-Relationship (ER) Model." A pdf is provided.

Take notes on the chapter. All quizzes are open-note.

Prioritize your reading and notes. The most important sections are 3.3 - 3.8.

Choose *just one specific question or component of a longer, multi-part question* from the Review Questions or Exercises at the end of the reading, and write a Piazza post as your response. If a question asks you to draw something, you may merely describe it (rather than posting an image).

Alternatively, you may respond meaningfully to a fellow student's answer such that you enhance, clarify or disagree what he or she has written.

Note: If you choose 3.27 or 3.28, you must answer at least half the question, identifying cardinalities for 3.27 items 1 - 5, 6 - 10; or True/False for 3.28 items a - g, h - m.
