

# Homework 7

Read DDI chapter 4 “Data Manipulation” through section 4.3 to the end of chapter 4.

Take brief notes on the chapter (list the names of all the relational algebra operations and what they mean). All quizzes are open-note. I recommend taking notes consisting of simple examples of SQL syntax, which you can use as a cheat-sheet.

There is no forum post for this assignment, but a quiz will be conducted in class on the basics of SQL, extracted from the reading.
